Dashboard

■ Command Center Dashboard

Overview

The Dashboard is your executive home screen, visible immediately after login. It provides a real-time overview of your entire workspace in a single glance — no scrolling required.

How to use

1. Navigate to Dashboard from the left sidebar or press D on your keyboard.
2. The hero section shows today's date, a dynamic greeting, and real-time KPI chips.
3. Click any chip (overdue, in-progress, goal health, etc.) to navigate directly to the filtered view.
4. Use + New Project or + New Goal buttons in the hero to create items without leaving the dashboard.
5. The quote bar at the top refreshes on every visit with an inspiring quote from 120+ curated authors.

■ ***Tip:*** *All dashboard sections are interactive — click any tile to navigate directly to that feature.*

■ Work Hub

Overview

A tile-based launcher showing all 10 work features with live counts. Gives instant access to every execution tool in one compact section.

How to use

1. Each tile shows an icon, feature name, and live count (e.g. '3 active', '5 total').
2. Overdue counts appear in red for immediate attention.
3. Click any tile to navigate directly to that feature.

■ ***Tip:*** *Tile counts update in real time from your backend data.*

■ Active Projects & Goals Cards

Overview

Side-by-side compact card views showing your most active projects and goals with inline progress bars and status badges.

How to use

1. Up to 6 projects and 6 goals are shown with progress bars and percentage.
2. Click any card to navigate to that project's task list or goal detail.
3. Use 'View all →' to see the full list.
4. Status badges (ACTIVE, PAUSED, etc.) are colour-coded for quick scanning.

■ ***Tip:*** *Cards stretch to equal height — if one side has fewer items, the other fills the space.*

■ Live Charts Panel

Overview

A sticky right-column panel with three tabs — Tasks, Projects, Goals — showing doughnut and horizontal bar charts with live data.

How to use

1. Switch between Tasks / Projects / Goals tabs to change the chart view.
2. Click any stat cell (Todo, Progress, Done, etc.) to navigate to that filtered view.
3. Click any bar in the Projects or Goals chart to jump to that item.
4. Charts update automatically when you return to the dashboard.

> ■ ***Tip:*** *The chart panel stays sticky as you scroll within the main grid.*

■ AI Insight Card

Overview

A dark navy card below the charts that shows a personalised AI-generated insight about your current workspace state — tasks in flight, overdue items, completion rate health.

How to use

1. The insight updates every time you load the dashboard.
2. Warning text (amber) highlights overdue items that need attention.
3. Success text (green) confirms when completion rate is above target.
4. Click 'Open AI →' to launch the full AI Assistant with context pre-loaded.

> ■ ***Tip:*** *The AI Insight is contextual — it reads your live summary data, not a static template.*

Work

■ Projects

Overview

The central hub for all your initiatives. Projects group tasks, goals, epics, sprints, and documents under a single initiative with its own colour, status, and progress tracking.

How to use

1. Create a project with + New Project from the dashboard hero or sidebar.
2. Set a name, colour, start/end date, and owner.
3. Assign team members and configure custom fields per project.
4. Track progress via the built-in progress bar, updated from task completion.
5. Filter projects by status: Active, Paused, Completed, Archived.
6. Export project data or share a read-only link with stakeholders.

■ ***Tip:*** *Use project colours consistently so they carry through to Kanban, Gantt, and Charts.*

■ Tasks

Overview

The core execution unit. Tasks support subtasks, checklists, priorities, assignees, due dates, custom fields, inline comments, SLA tracking, and task relationships.

How to use

1. Create a task with the + button or press T from any view.
2. Set priority (Low / Medium / High), due date, assignee, and project.
3. Add subtasks by clicking 'Add subtask' inside a task.
4. Use checklists for step-by-step completion tracking.
5. Link tasks as Blocked By, Blocks, Relates To, or Duplicate.
6. Apply custom fields for domain-specific metadata.
7. Filter by status, assignee, due date, priority, or custom field values.

■ ***Tip:*** *Overdue tasks appear in red across the dashboard chips and Work Hub tile.*

■ Goals

Overview

OKR-style goal tracking. Goals have a title, description, target metric, progress percentage, health status, and can be linked to projects and tasks for auto-progress.

How to use

1. Create a goal from the dashboard hero (+ New Goal) or the Goals page.
2. Set a target value and unit (%, $, count, etc.).
3. Link child goals or contributing projects for roll-up progress.
4. Update progress manually or let Projectly auto-calculate from linked tasks.
5. Monitor goal health: On Track (green), At Risk (amber), Off Track (red).
6. Use the Goals chart tab in the dashboard to see all goals visually.

> ■ ***Tip:*** *Goal health percentage is shown on the dashboard hero chip for instant visibility.*

■ Kanban Board

Overview

A drag-and-drop visual board with customisable columns. Supports WIP limits, swimlanes by assignee or priority, and real-time collaboration.

How to use

1. Navigate to Kanban from the sidebar or Work Hub.
2. Drag cards between columns to update status instantly.
3. Add a column with the + Column button and name it.
4. Set WIP limits per column to prevent overloading.
5. Filter the board by assignee, priority, or project.
6. Click a card to open the full task detail panel.

> ■ ***Tip:*** *Kanban columns sync with task statuses — moving a card updates the task status everywhere.*

■ Epics

Overview

Large bodies of work that span multiple sprints and tasks. Epics provide a high-level view of major deliverables with progress tracked from child tasks.

How to use

1. Create an epic with a name, description, start/end date, and owner.
2. Add tasks to an epic directly from the task creation form.
3. View epic progress as a percentage of completed child tasks.
4. Use the Epics page to see all epics across projects in one view.
5. Filter epics by project, status, or date range.

> ■ ***Tip:*** *Epics appear on the Gantt chart as parent bars spanning their child tasks.*

■ Sprints

Overview

Time-boxed iterations for agile teams. Create sprints, assign tasks, track velocity, and run sprint ceremonies from one place.

How to use

1. Create a sprint with a name, start date, and end date (typically 2 weeks).
2. Add tasks to the sprint from the backlog or task creation form.
3. Start the sprint to lock in the scope and begin the countdown.
4. View sprint progress via the burndown chart and remaining task count.
5. Complete a sprint to see velocity and auto-move incomplete tasks to the next sprint.
6. Use the Sprint Day counter on the dashboard to see current progress.

> ■ ***Tip:*** *The dashboard hero shows 'Sprint X · Day N of 14' for the current active sprint.*

■ Gantt Chart

Overview

A timeline view of all projects, epics, and tasks. Drag bars to adjust dates, connect dependencies with arrows, and spot schedule conflicts visually.

How to use

1. Navigate to Gantt from the sidebar or Work Hub.
2. Rows show projects (collapsed) or tasks (expanded).
3. Drag the left/right edge of a bar to change start/end dates.
4. Drag a dependency arrow from one task to another to set a blocker.
5. Use the zoom controls to switch between Day / Week / Month / Quarter views.
6. Export the Gantt as an image or PDF for stakeholder reports.

> ■ ***Tip:*** *Red dependency arrows indicate conflicts where a task starts before its blocker ends.*

■ Calendar

Overview

A calendar view of all tasks due today and upcoming. Supports month, week, and day views with drag-and-drop rescheduling.

How to use

1. Tasks with due dates appear on their due date as coloured chips.
2. Drag a chip to a new date to reschedule the task.
3. Click a chip to open the task detail.
4. Filter by project, assignee, or priority to reduce noise.
5. The dashboard hero chip shows how many tasks are due today.

> ■ ***Tip:*** *Use the Calendar weekly view during standups to show what the team has due this week.*

■ Deployments (DORA)

Overview

Track software deployment metrics using the DORA framework: Deployment Frequency, Lead Time for Change, Change Failure Rate, and Mean Time to Recovery.

How to use

1. Log a deployment with service name, version, environment, and outcome.
2. View your four DORA metrics as gauges: Elite / High / Medium / Low.
3. Set targets per metric to track improvement over time.
4. Link deployments to tasks or epics for full traceability.
5. Export DORA data as CSV for engineering reviews.

> ■ ***Tip:*** *DORA Elite teams deploy multiple times per day with < 1hr lead time.*

■ Knowledge Graph

Overview

A visual network map showing connections between projects, tasks, goals, decisions, and documents. Reveals hidden dependencies and knowledge clusters.

How to use

1. Open Knowledge Graph from the sidebar or Work Hub.
2. Nodes represent entities (projects, tasks, docs, decisions).
3. Edges show relationships (blocks, relates to, references).
4. Click a node to open its detail panel.
5. Use the filter panel to show only specific entity types.
6. Zoom in/out with the scroll wheel; drag to pan the canvas.

> ■ ***Tip:*** *The more you link tasks, docs, and decisions together, the richer the graph becomes.*

Knowledge

■ Docs

Overview

A rich-text document editor for team wikis, technical specs, runbooks, and any long-form content. Supports images, tables, code blocks, mentions, and version history.

How to use

1. Create a doc with + New Doc from the Docs page.
2. Use the toolbar to format text, add headings, insert tables, and embed images.
3. Mention teammates with @name to notify them.
4. Embed a task or goal with /task or /goal commands.
5. See version history by clicking the clock icon in the top-right.
6. Share a doc with a public or workspace link.

■ ***Tip:*** *Docs are indexed in the Knowledge Graph and searchable across the workspace.*

■■ Decisions

Overview

A structured decision log for recording architectural, product, and business decisions with context, options considered, and outcome rationale.

How to use

1. Create a decision with a title, date, decision-maker, and status.
2. Document the context (why this decision was needed).
3. List options considered and the pros/cons of each.
4. Record the final decision and the rationale.
5. Link the decision to relevant tasks, docs, or projects.
6. Mark decisions as Active, Superseded, or Deprecated.

■ ***Tip:*** *The Knowledge Graph shows decisions as nodes connected to the projects they affected.*

■ Meetings

Overview

Meeting notes and schedule management. Record agenda, attendees, discussion notes, and action items that automatically become tasks.

How to use

1. Create a meeting with title, date, time, and attendees.
2. Fill in the agenda before the meeting.
3. During the meeting, add notes in real time — changes save automatically.
4. Add action items in the Action Items section; they become tasks instantly.
5. Mark the meeting as Done when finished.
6. Link the meeting to a project for context.

> ■ ***Tip:*** *Action items created in Meetings appear immediately in the Tasks list with the meeting as context.*

■ SOPs

Overview

Standard Operating Procedures — structured, repeatable process documents with step-by-step instructions, responsible roles, and version tracking.

How to use

1. Create an SOP with a title, category, and owner.
2. Add numbered steps with descriptions, screenshots, and notes.
3. Assign a responsible role to each step.
4. Set a review frequency and last-reviewed date for freshness.
5. Duplicate an SOP to create a variation for a different context.
6. Link SOPs to relevant projects or task types.

> ■ ***Tip:*** *SOPs with stale review dates are highlighted in the Knowledge Freshness report.*

Insights

■ Analytics

Overview

Real-time dashboards showing task velocity, completion rates, team throughput, and project health metrics across configurable time ranges.

How to use

1. Select a date range with the date picker (7d, 30d, 90d, custom).
2. Switch between project, team, or workspace-level views.
3. Hover over any chart point to see exact values.
4. Use the comparison toggle to compare this period vs the last.
5. Export charts as PNG or the underlying data as CSV.

> ■ ***Tip:*** *Analytics data refreshes every 5 minutes for near-real-time accuracy.*

■ Portfolio

Overview

A cross-project portfolio view showing all active initiatives with status, health, budget consumption, and timeline at a glance.

How to use

1. See all projects ranked by health or schedule risk.
2. Filter by project type, owner, or date range.
3. Click a project row to drill into its detail.
4. Use the heat map view to spot clusters of at-risk projects.
5. Export the portfolio report as PDF for executive review.

> ■ ***Tip:*** *Portfolio view is the go-to for quarterly business reviews and board presentations.*

■■ Roadmap & RAID

Overview

Strategic roadmap planning combined with RAID log management (Risks, Assumptions, Issues, Dependencies). Keep strategy and execution aligned.

How to use

1. Add roadmap milestones with dates and owners.
2. Link milestones to projects and epics for execution tracking.
3. Log RAID items with category, description, impact, and mitigation.
4. Set RAID item status: Open, In Progress, Closed.
5. The dashboard hero shows your current open RAID risk count.
6. Export the RAID log as Excel for stakeholder distribution.

> ■ ***Tip:*** *RAID risks with High impact and no mitigation plan appear in red on the dashboard chip.*

■ Portfolio+

Overview

Advanced portfolio analytics with dependency mapping, resource capacity overlays, and multi-dimensional filtering for enterprise programme managers.

How to use

1. View resource allocation across all projects simultaneously.
2. Identify over-allocated team members with the capacity heat map.
3. Map cross-project dependencies visually.
4. Simulate the impact of delaying one project on others.
5. Set portfolio-level OKRs and track alignment to strategy.

> ■ ***Tip:*** *Portfolio+ is ideal for programme managers overseeing 10+ concurrent projects.*

■ KPI Tracker

Overview

Define, track, and visualise Key Performance Indicators across your business. Set targets, alert thresholds, and connect KPIs to goals.

How to use

1. Create a KPI with a name, unit, target value, and frequency.
2. Log KPI values manually or via API integration.
3. Set a green/amber/red threshold for traffic-light status.
4. Link KPIs to Goals for auto-progress updates.
5. View KPI trend lines over the selected date range.
6. Configure email alerts when a KPI crosses a threshold.

> ■ ***Tip:*** *KPIs connected to Goals automatically update goal progress percentages.*

■ Executive View

Overview

A C-suite-ready dashboard showing company-wide OKRs, portfolio health, team capacity, and financial performance in a single page designed for leadership.

How to use

1. Access via Insights > Executive in the sidebar.
2. Select the business unit or team scope from the top filter.
3. Metrics are pre-aggregated — no configuration needed.
4. Use the presentation mode (F key) for board meetings.
5. Schedule an automated weekly PDF email to executives.

> ■ ***Tip:*** *Executive View respects role-based permissions — only Owners and Admins see financial data.*

■ ROI Engine

Overview

Calculate and forecast Return on Investment for projects and initiatives. Track actual vs forecasted ROI, cost variance, and benefit realisation.

How to use

1. Enter project costs (people, tools, infrastructure) and expected benefits.
2. ROI is calculated automatically: (Benefit - Cost) / Cost × 100%.
3. See a waterfall chart of costs vs benefits over time.
4. Use scenario planning to model best/base/worst case ROI.
5. The dashboard hero chip shows your aggregate ROI forecast.
6. Export the ROI model as Excel for finance review.

> ■ ***Tip:*** *Connect ROI Engine to KPI Tracker to auto-populate benefit values from real metrics.*

■ Scenarios

Overview

What-if planning tool. Model the impact of scope, timeline, or resource changes across multiple scenarios without affecting live project data.

How to use

1. Create a scenario by duplicating the current project plan.
2. Adjust dates, resources, costs, or scope in the scenario.
3. Compare scenarios side-by-side using the comparison view.
4. Promote a scenario to the live plan when approved.
5. Attach scenarios to decision records for traceability.

> ■ ***Tip:*** *Scenarios are sandboxes — changes here never affect live tasks or timelines.*

■ Reports

Overview

Pre-built and custom report templates covering status reports, sprint summaries, resource utilisation, and more. Schedule automated delivery by email.

How to use

1. Choose from 20+ pre-built report templates.
2. Set the date range, project scope, and recipient list.
3. Preview the report before sending.
4. Schedule weekly, fortnightly, or monthly automated delivery.
5. Build custom reports by selecting metrics and chart types.
6. Export any report as PDF, Excel, or CSV.

> ■ ***Tip:*** *Status reports auto-populate from task and goal data — no manual writing required.*

■ Time & Billing

Overview

Track time spent on tasks and projects, generate invoices, and monitor billable vs non-billable hours across your team.

How to use

1. Start a timer on any task with the Play button.
2. Manually log time with date, duration, and description.
3. Set hourly rates per team member or project.
4. View timesheets by day, week, or month.
5. Generate invoices from logged time with client details.
6. Export timesheets as CSV for payroll or client billing.

> ■ ***Tip:*** *Time logs appear on task cards so the team can see effort at a glance.*

Automate

■ BPM Studio

Overview

A visual Business Process Management (BPM) designer. Build drag-and-drop workflow diagrams (BPMN) that model your team processes and trigger automations.

How to use

1. Open BPM Studio from Automate in the sidebar.
2. Drag process elements (Start, Task, Gateway, End) onto the canvas.
3. Connect elements with flow arrows.
4. Attach automations to BPMN tasks to trigger real actions.
5. Save and activate a process to start it running.
6. Monitor active process instances in the Process Monitor panel.

■ ***Tip:*** *BPM processes can span multiple projects and teams for cross-functional workflows.*

■ Automations

Overview

Rule-based automations using a Trigger → Condition → Action model. Automate repetitive work like status changes, notifications, and task creation.

How to use

1. Click + New Automation to open the rule builder.
2. Choose a Trigger: Task Created, Status Changed, Due Date Approaching, etc.
3. Add optional Conditions to narrow when the rule fires.
4. Set one or more Actions: Send notification, Update field, Create task, etc.
5. Enable the automation and test it with a dry run.
6. View automation history to see all triggered executions.

■ ***Tip:*** *Automations fire in milliseconds — use them to eliminate status-update meetings entirely.*

■ Integrations

Overview

Connect Projectly to external tools: Slack, Jira, GitHub, Google Drive, Salesforce, Zapier, and more via native integrations and webhooks.

How to use

1. Go to Automate > Integrations and click + Add Integration.
2. Authenticate with the external service using OAuth or API key.
3. Configure the sync direction (push, pull, or bidirectional).
4. Map fields between Projectly and the external tool.
5. Set the sync frequency (real-time, hourly, daily).
6. Test the connection with the Test button before activating.

> ■ ***Tip:*** *Webhook integrations allow any external system to push events into Projectly in real time.*

■ Import

Overview

Bulk import tasks, projects, goals, and team members from CSV, Excel, Jira, Asana, Trello, or Monday.com.

How to use

1. Go to Automate > Import and select the source format.
2. Download the template CSV to understand the required columns.
3. Fill in your data and upload the file.
4. Map your columns to Projectly fields in the mapping UI.
5. Preview the first 10 rows before committing the import.
6. Run the import and check the results log for any errors.

> ■ ***Tip:*** *Import supports up to 10,000 rows per file. For larger datasets, split into multiple files.*

Collaborate

■ Channels

Overview

Team messaging channels organised by project, topic, or team. Supports threaded replies, file sharing, mentions, reactions, and pinned messages.

How to use

1. Create a channel with a name and invite members.
2. Post messages with the text box at the bottom.
3. Use @mention to notify specific teammates.
4. Reply in a thread to keep discussions organised.
5. Pin important messages with the pin option.
6. Link a channel to a project so project updates auto-post here.

■ ***Tip:*** *Auto-post automations can push task updates directly into relevant channels.*

Team

■ Team Members

Overview

Manage your workspace members — roles, permissions, project assignments, and workload visibility.

How to use

1. Invite members via email from Team > Invite Member.
2. Assign roles: Owner, Admin, Member, Guest.
3. View each member's current task workload and capacity.
4. Reassign tasks in bulk from the workload view.
5. Deactivate members who leave the team without deleting their data.

■ ***Tip:*** *Guest role members can only see projects they are explicitly added to.*

■ Activity Log

Overview

A full audit trail of every action taken in the workspace — task changes, comment edits, permission updates, and integration events.

How to use

1. Filter by member, date range, entity type, or action type.
2. Click any log entry to jump to the changed item.
3. Export the activity log as CSV for compliance audits.
4. Set up alert rules for sensitive actions (e.g. member role changes).

■ ***Tip:*** *Activity Log retains 12 months of history on all plans.*

Configure

■ Categories

Overview

Create and manage category tags that can be applied to tasks, projects, and docs for filtering and reporting.

How to use

1. Create a category with a name and colour.
2. Apply categories to tasks, projects, or docs from their detail panel.
3. Filter any list view by one or more categories.
4. Use categories in Automation conditions for targeted rules.

> ■ ***Tip:*** *Categories are workspace-wide — create a taxonomy that works across all projects.*

■■ Custom Fields

Overview

Extend the data model with your own fields — text, number, date, select, multi-select, checkbox, URL, and formula fields.

How to use

1. Go to Configure > Custom Fields and click + Add Field.
2. Choose the field type and configure its options.
3. Assign the field to tasks, projects, goals, or all entity types.
4. Fields appear in list views, task detail panels, and filters.
5. Use formula fields to compute values from other fields automatically.
6. Export data with custom fields included in CSV/Excel exports.

> ■ ***Tip:*** *Custom fields are included in all Automation conditions and report filters.*

■ Workspace Settings

Overview

Global workspace configuration — name, logo, timezone, language, date format, default views, and notification preferences.

How to use

1. Set the workspace name and upload a logo.
2. Configure the default timezone for due date calculations.
3. Set the first day of the week for Calendar views.
4. Configure default task statuses for new projects.
5. Manage email notification templates and delivery preferences.

■ ***Tip:*** *Timezone setting affects all due date displays and scheduled automation triggers.*

■ Admin Center

Overview

Enterprise administration: SSO configuration, SCIM provisioning, data residency, audit logs, and security policies.

How to use

1. Configure SAML/SSO with your identity provider (Okta, Azure AD, Google).
2. Enable SCIM for automated user provisioning and deprovisioning.
3. Set password and MFA policies for all workspace members.
4. Configure IP allow-lists for network access control.
5. Manage data retention and export policies for compliance.

■ ***Tip:*** *Admin Center features require the Owner role and are available on Enterprise plans.*

■ Developer

Overview

API access, webhook management, OAuth app registration, and developer documentation for building integrations and custom tools.

How to use

1. Generate API tokens from Developer > API Keys.
2. View the interactive API documentation at /api/docs.
3. Register an OAuth app for user-authorised API access.
4. Configure webhooks to receive real-time event notifications.
5. Test API endpoints directly in the browser with the API Explorer.
6. Use the Projectly SDK (npm: @projectly/sdk) for faster integration.

■ ***Tip:*** *Webhook events include full JSON payloads — no additional API calls needed for most integrations.*

AI

■ AI Assistant

Overview

A conversational AI powered by advanced language models, trained on your workspace context. Ask questions, get summaries, draft content, and take actions via chat.

How to use

1. Open AI Assistant from the sidebar or click 'Open AI →' on the dashboard.
2. Type a question in natural language: 'What tasks are overdue?'
3. Ask for summaries: 'Summarise project Alpha's last 7 days.'
4. Draft content: 'Write a status update for the Q3 roadmap.'
5. Take actions: 'Create a task: Review design mockups, due Friday.'
6. Reference specific items: 'What's the status of RAID risk #44?'

■ ***Tip:*** *The AI Assistant has full context of your workspace — tasks, goals, projects, and docs.*

■ AI Intelligence

Overview

Proactive AI insights surfaced across the workspace — sprint risk predictions, resource bottleneck alerts, goal trajectory forecasts, and anomaly detection.

How to use

1. Navigate to AI > AI Intelligence for the full insights dashboard.
2. Each insight card shows the finding, confidence level, and recommended action.
3. Click 'Take action' to execute the AI's recommendation directly.
4. Configure which insight types to receive via the settings toggle.
5. Insights are also summarised on the dashboard AI Insight card.

■ ***Tip:*** *AI Intelligence learns from your team's patterns over time — accuracy improves with usage.*

■ AI Settings

Overview

Configure AI behaviour — model selection, data usage preferences, insight frequency, and which features have AI assistance enabled.

How to use

1. Go to AI > AI Settings to manage all AI configuration.
2. Toggle AI assistance on/off per feature (tasks, docs, meetings).
3. Set insight delivery frequency: real-time, daily digest, or weekly.
4. Configure data privacy: choose whether to use workspace data for model fine-tuning.
5. Select the AI model tier (Standard / Advanced) per use case.

> ■ ***Tip:*** *AI Settings changes apply immediately — no restart required.*

Topbar

■ Live Clock

Overview

Real-time clock showing current time, date, and timezone displayed in the topbar.

How to use

1. The clock updates every second automatically.
2. Shows time in HH:MM format with seconds.
3. Displays day of week, date, and your local timezone.

■ ***Tip:*** *The clock uses your browser's local timezone for accuracy.*

■ Search (■K)

Overview

Universal search across all workspace content — tasks, projects, docs, goals, decisions, and team members. Also accessible as a Command Palette for quick navigation.

How to use

1. Click the Search bar or press ■K (Mac) / Ctrl+K (Windows).
2. Type any keyword to search across all entity types.
3. Use prefix filters: task:, project:, doc:, goal: to narrow results.
4. Press Enter on a result to navigate to it.
5. The Command Palette also accepts navigation commands: /kanban, /dashboard.

■ ***Tip:*** *Search indexes titles, descriptions, comments, and custom field values.*

■ Design Switcher

Overview

Switch between 71 built-in visual designs across 9 categories: Professional, Playful, Dark, Nature, Minimal, Glassmorphism, Retro, Neon, 3D, and Scenic.

How to use

1. Click the Design button in the topbar.
2. Browse by category using the tab filters.
3. Click any design card to apply it instantly.
4. Use the search box to find a design by name.
5. Click + Custom to build your own design with 14 colour pickers.
6. Custom designs are saved locally and persist across sessions.

> ■ ***Tip:*** *Designs persist across page navigation — your choice is saved in localStorage.*

T Font Switcher

Overview

Change the application font across 20 options in three categories: Sans-serif (15), Serif (3), and Monospace (2). Live hover preview shows fonts before applying.

How to use

1. Click the Font button in the topbar.
2. Hover over any font to preview it live across the entire app.
3. Click to apply the font permanently.
4. Use category tabs to filter by Sans-serif, Serif, or Monospace.
5. Click 'Reset to default' to restore Inter.

> ■ ***Tip:*** *Font choice is saved and restored on every page load.*

■ Theme Switcher

Overview

Switch between preset colour themes that update the accent colours, sidebar, and interactive elements across the app.

How to use

1. Click the colour palette icon in the topbar.
2. Select a theme from the dropdown to apply instantly.

> ■ ***Tip:*** *Themes work alongside Design Switcher — themes set accent colours, Designs set the full visual language.*

■ Dark Mode

Overview

Toggle between light and dark mode. Dark mode reduces eye strain in low-light environments and applies a dark colour palette across the entire application.

How to use

1. Click the moon/sun icon in the topbar to toggle.
2. Your preference is saved and restored on next visit.
3. All 71 designs support dark mode with adapted colour values.

> ■ ***Tip:*** *Dark mode is recommended for long working sessions to reduce eye strain.*

■ Notifications

Overview

Real-time notification centre for task assignments, mentions, due date reminders, automation alerts, and workspace activity.

How to use

1. Click the bell icon to open the notification panel.
2. Unread count badge shows number of new notifications.
3. Click a notification to navigate to the relevant item.
4. Mark all as read with the checkmark button.
5. Configure notification preferences in Workspace Settings.

> ■ ***Tip:*** *Enable browser notifications for real-time alerts even when Projectly is in the background.*

The all-in-one enterprise project management platform.

This guide covers all features available in Projectly as of version 1.0. For the latest updates, visit your workspace's Help Centre or contact support.
